ASSET AND APPLICATION DISCOVERY

How Do You SECURE What You Don't See

SANS Critical Security Controls 1 and 2 emphasize that organizations must maintain positive control of their assets and applications to build a comprehensive security program.

When organizations struggle to track assets and software, they risk incomplete or inaccurate inventories, leading to potential security gaps. Without a standard baseline for network devices and endpoint configurations, effective monitoring becomes impossible, leaving vulnerabilities in your security and compliance programs.

A complete inventory of network-connected endpoints—including the software and services they run—is essential for identifying potential risks. As networks grow with the addition of IT, IoT, and OT devices, enhancing endpoint awareness is critical to safeguarding your organization. With countless connected devices such as printers, sensors, cameras, and production equipment, understanding their security posture is vital.

An Asset and Application Inventory Management Service offers numerous benefits, including:

IMPROVED SECURITY
Identify and manage assets while implementing essential security measures like firewalls and intrusion detection systems.

ENHANCED VISIBILITY
Gain insights into potential threats, vulnerabilities, and network performance.

REGULATORY COMPLIANCE
Ensure adherence to laws and regulations through better oversight.

OPERATIONAL EFFICIENCY
Automate and streamline the inventory management process for better resource utilization.

Key Benefits

1. Identify, secure, and manage assets and applications
2. Improved visibility into the network
3. Expanded compliance posture
4. Increased efficiency through automation
5. Identify potential licensing issues

CONSISTENCY WITH

MAINLINE

Traffic and logs digested from multiple sources providing a detailed analysis.

Deep and comprehensive data collected on all network devices and remotely connected devices.

Not limited to specific technology platforms, the discovery will find and analyze all devices with an IP address. Discovery can be agentless, without a need to install anything on a device or endpoint.

Certified expert and in-depth analysis of collected data.

Ability to identify well-known vulnerabilities and detect common and weak clear text passwords in use across the network.

With the help of Mainline's Asset and Application Discovery and Analysis, customers can detect network-connected devices that weren't previously known and identify all applications. Mainline's Asset and Application Discovery and Analysis will close the gap in your network security and compliance programs—addressing all vulnerabilities and potential pitfalls.

Protect Data, Prevent Issues, Mitigate Risk, & Improve Efficiency

Mainline Information Systems is a US-based IT solutions and consulting firm with deep expertise in cybersecurity programs. Working with top cybersecurity technology companies, Mainline provides a range of protection methods and approaches to threat detection to help keep your business systems, network, and edge computing solutions safe from malicious actors.
