

CASE STUDY:

Data Center Consolidation Reduces Complexity, Saves Money

Whether through acquisition, or distributed growth, many companies now find themselves with multiple data centers and the operating and capital expense needed to support them.

Although many companies would like to consolidate their data center assets, the technical challenge and perceived risk often outweighs the desire. Realizing the significant cost savings to be gained by a multi-data center consolidation, this large utility delivery company embraced their trusted partner, Mainline, to plan, design and implement their new consolidated infrastructure. Managed by a certified Mainline project manager (PMP), Mainline engineers performed workload and data migrations, technology upgrades, data replications, high availability upgrades and the implementation of net new technology. Completing this consolidation in only 45 days, this client was able to achieve substantial cost savings, while increasing IT manageability.

Solution:

- Data Center Consolidation Planning and Design services
- Data Migration services
- Workload Migration services
- Data Replication services
- TSM Migration services
- High Availability Upgrade services
- Technology Upgrade services
- IBM Power 7
- IBM PureFlex
